closy

The AI agent that negotiates with your suppliers

The buyer that never says anything it cannot prove.

closy

Our approach and implementation

An LLM can write, but it can't be trusted to count or to tell the truth. So we split the job.

1 · Company data

Facts with IDs

Case file, contracts, supplier letters, orders, indices, scorecards, plus the Sunday release.

→

2 · Economic engine

Exact total cost

The arena's own cost function, to the euro on P01 · up to 2,000 term packages · levers ranked in € (P01: moving the start date is worth €40k, more than the price cut).

→

3 · Evidence engine

Only facts that help us

Verifiable facts that argue for us · every figure checked before sending · each argument type measured on 202 sessions: rising price history taken into account 9/10, flat history 0/24.

→

4 · Policy

Anchor, concede, close

Opening anchor, decreasing concession schedule, close or walk away · one thread per supplier.

→

5 · Guard → email

Checked, then sent

References, figures and must-haves are checked before the email leaves.

Between games: Idea → Criterion written first → Test: simulator, practice → Keep or drop — 1 kept, 4 dropped (incl. an ECAI 2012 opponent model and an ANAC strategy)

What's new: persuasion you can audit and measure. Every sentence traces to a fact; every argument type is scored by how often a supplier takes it into account.

Sources: vault "Pitch - notre approche"; D1 (cost to the euro on P01), D3 (€40,257 for the start date); X9 (202 practice sessions); R1-R4 (experiments, criteria written first; kept: the runner fix); agent `hollerau/pegasus` at `4fabd57`.

closy

The lowest price isn't always the best deal.

The quoted price is only one part of a deal. In the arena, when the buyer pays, exposure to future price changes and the supplier's remaining margin also affect the total cost.

In one practice case, the cheaper quote cost the buyer

€26.7k more.

DEAL A · CHEAPER QUOTE

€344.20 / unit

6,110 units at this price	€2.103m
Pay in 14 days	+€21.5k
Price-index risk	+€16.8k
Supplier-margin penalty	+€143.2k
Total buyer cost	€2.286m

DEAL B · LOWER TOTAL COST

€371.92 / unit

6,110 units at this price	€2.272m
Pay in 90 days	−€15.1k
No price-index risk	€0
Supplier-margin penalty	+€0.6k
Total buyer cost	€2.259m

Why the penalty? The arena assigns a cost when a deal leaves a strategic supplier below its sustainable margin.

Same supplier and volume, two completed P02 practice runs with different terms. Amounts rounded; totals also include identical quality costs. Illustrative comparison, not a controlled test. Sources: Deal A · Deal B.

closy

Every concession needs a reason.

Paying sooner gives something to the supplier. In this recorded negotiation, Closy asked for a lower price in return.

1 · We give

45 days
→ 14 days

The buyer pays earlier. The supplier gets its cash sooner.

2 · We get

€137.90
→ €132.40

A lower price per unit in the supplier's next offer.

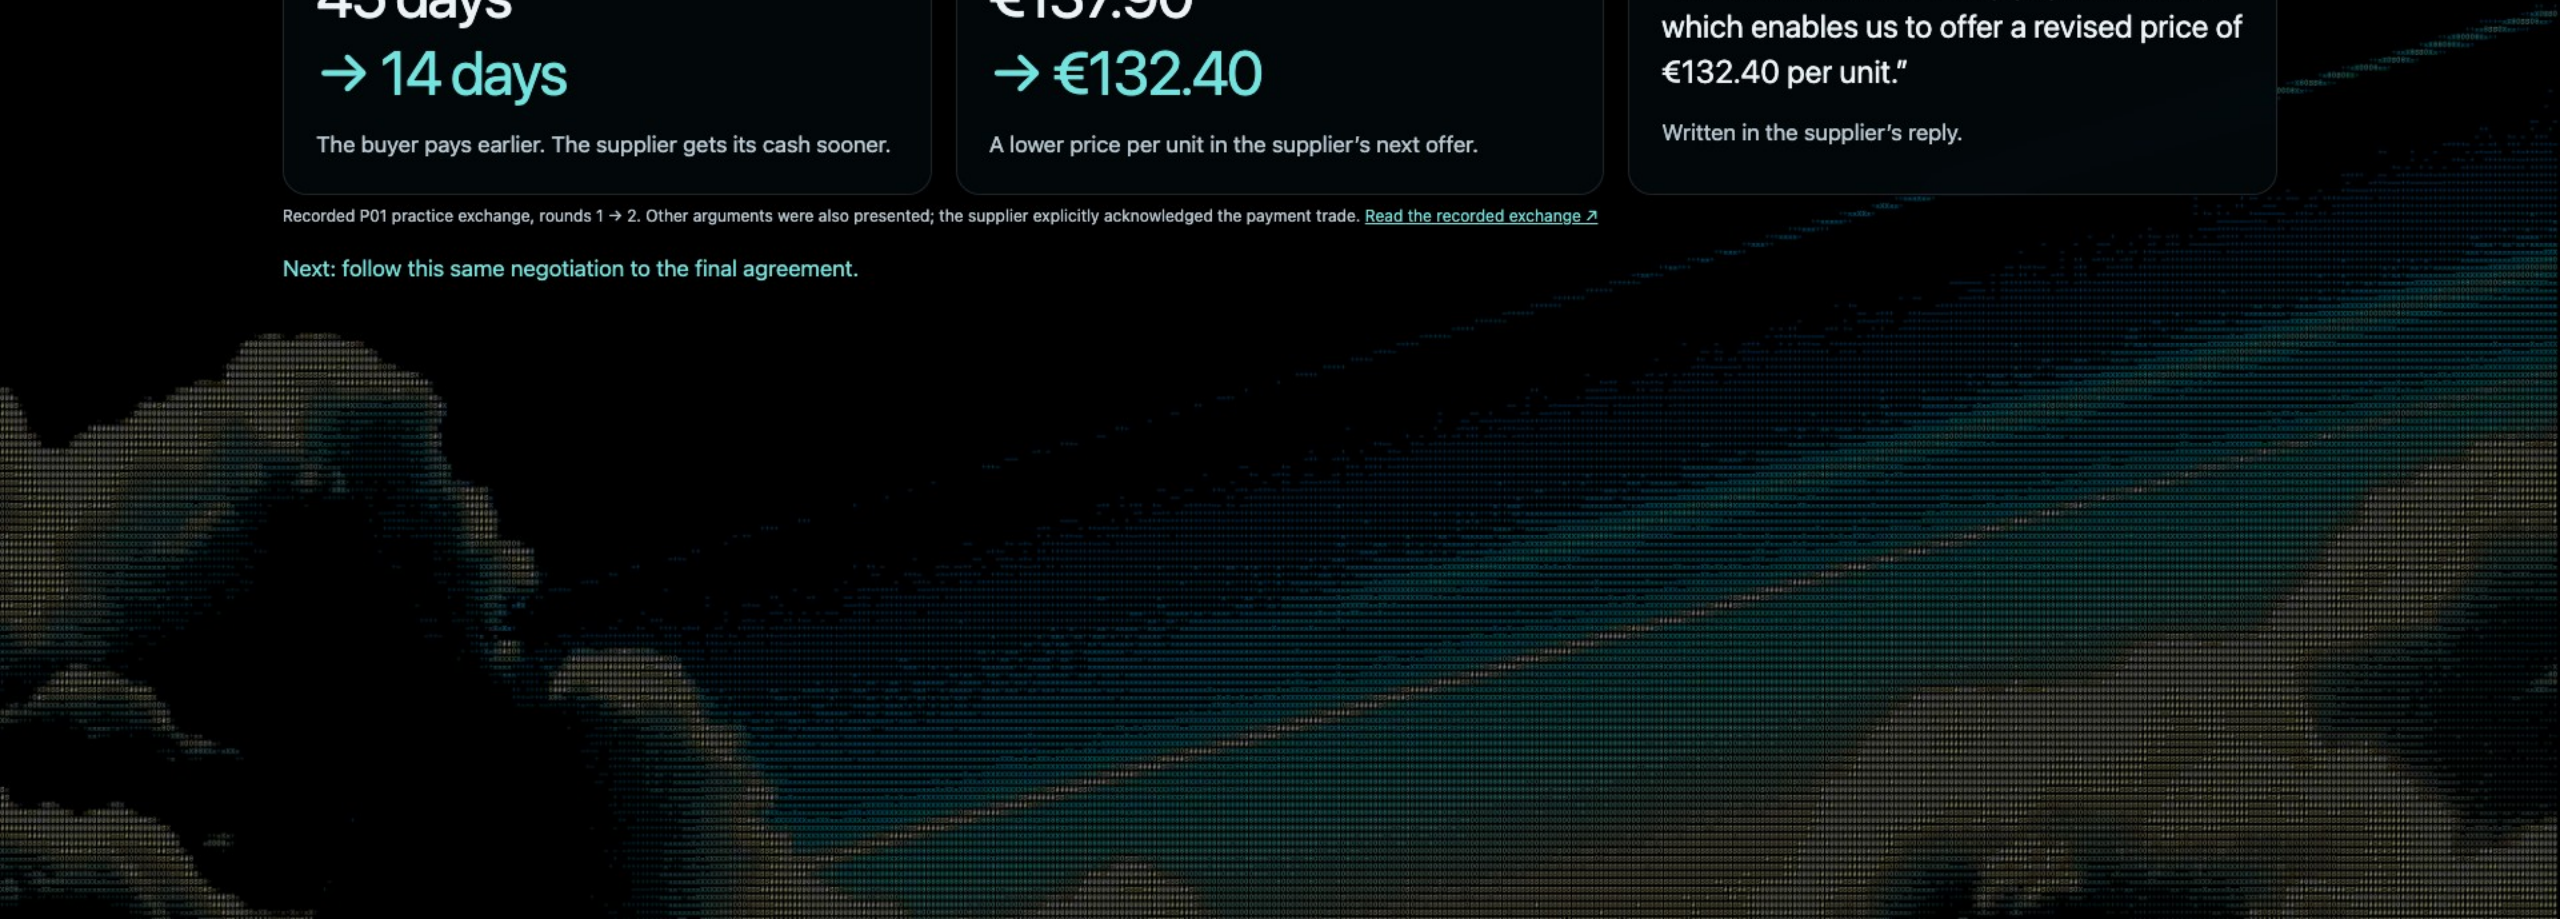

3 · The supplier confirms why

"We welcome the 14-day payment term, which enables us to offer a revised price of €132.40 per unit."

Written in the supplier's reply.

Recorded P01 practice exchange, rounds 1 → 2. Other arguments were also presented; the supplier explicitly acknowledged the payment trade. Read the recorded exchange ↗

Next: follow this same negotiation to the final agreement.

closy

The proof was in the contract.

The supplier announced +9.5% from 1 Nov 2026. Our contract said: not before 1 Jan 2027.

WHAT THE SUPPLIER WROTE

51 days' notice

Letter of 11 Sep: new price from 1 Nov 2026

doc:20260911-70110-P01

WHAT OUR CONTRACT SAYS

90 days' notice

Prices fixed per calendar year → earliest change 1 Jan 2027

ctr:4600070110#3.1

1 · Closy cited both documents in its email.

2 · Supplier: "We did not know that – a fair point."

3 · New price only from 1 Apr 2027: five more months at the old price (≈ €40k vs. the supplier's demand).

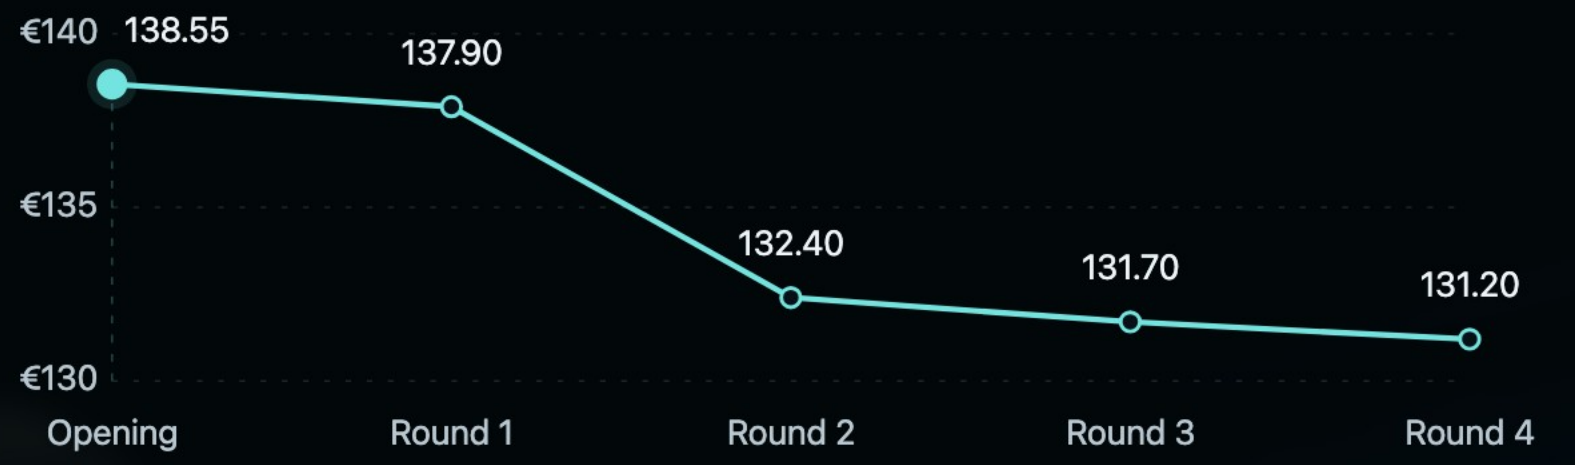

Recorded P01 practice session 3a0b48ea, accepted deal: effective 1 Apr 2027 · Open the replay ↗

closy

One negotiation, step by step.

P01 practice example · Follow the supplier's five offers, from the first quote to the accepted deal.

Supplier price per unit · Each point is an offer, not the total deal cost.

Explore the offers — Offer 1 of 5

Supplier's first offer

€138.55 / unit

The supplier asks for €138.55 per unit. Closy checks the contract and the supplier's cost claims before replying.

Payment due
30 days

Price starts
Nov 2026

The opening email did not specify payment terms; 30 days is the recorded default.

Deal reached: €1,096,916.90 in total cost · €56,862.84 less than the opening total cost.

Observed P01 session, 10 Oct 2026 · historical agent commit b09063f · not a result of the latest code revision.

Why did Closy write that?

Closy's first email on P01, as sent · select a sentence · Re: Brandlhuber announces +9.5 % on HN volute casings

Dear Sir or Madam,

thank you for your offer regarding brandlhuber announces +9.5 % on hn volute casings. template

Our should-cost estimate for this part is 132.64 EUR (cost:310010). cost:310010

Your letter gives 51 days notice (doc:20260911-70110-P01), while our contract requires 90 days (ctr:4600070110). 2 sources

Our volume forecast for this part is up 10.1% (fc:310010@2026-09). fc:310010@2026-09

Each of the attached packages works for us; please choose the one that suits you best. 3 packages

Could you send us a cost breakdown for this part? request

We value our cooperation and would like an agreement that covers our full need. template

Best regards · Hollerau Pumpenwerke GmbH, Purchasing

Argument · Notice period · arena check: verified

51 days notice

Evidence cited

doc:20260911-70110-P01 (supplier letter)
ctr:4600070110 (contract)

Supplier replied

"We checked the notice period data you cited; it holds and we took it into account."

Taken into account, by argument type

Notice period: not measured in X9.

The code sets every offer; the data provides every argument; nothing ships unmeasured.

Sources: recorded P01 session 3a0b48ea4e9dae20 (round 1 email and supplier reply, arena claim checks) · supplier verdicts per argument type: vault X9, 202 practice sessions · robustness and what did not work: vault R1-R3 and the unseen-cases run. Open the replay ↗

closy

How Closy makes a decision.

A supplier email goes through four modules before Closy replies.

1 · Read the email

12 signals

An optional LLM tags supplier signals. Each one must quote an exact email line; a keyword reader takes over if the LLM is unavailable.

2 · Calculate the deal

2,000 max

Code evaluates permitted combinations of terms with the published total-cost function. The arithmetic runs outside the model.

3 · Choose a move

1 / supplier

The policy uses the signals and costs to counter, accept, or walk away. One worker follows each supplier thread; decisions share a lock.

4 · Check and send

Final guard

Before sending, a guard checks references, figures, mandatory terms, and sensitive wording. The runner then sends the checked message.

The LLM reader is optional in this code; the practice results shown earlier include different agent versions.

Robustness: 5 crashes in 45 parallel games before the runner fix, 0 in 40 after (local simulator). 0 crashes on 21 cases, including 9 the arena never hosted (local simulator, 60 s clock).

What didn't work: a relationship price floor meant to win P02 cut its score from 0.48 to 0.26. We switched it off.

Code: reader ↗ · cost engine ↗ · runner ↗ · guard ↗
